The screenshot displays the Microsoft Azure Marketplace interface. The top navigation bar includes the 'Microsoft Azure' logo and a search bar. The left sidebar lists various categories: IT & Management Tools (3653), Compute (3320), Security (2516), Analytics (2230), Developer Tools (2206), Web (1784), Networking (1364), AI + Machine Learning (1340), Storage (1324), DevOps (1212), Databases (1139), Media (557), and Identity (497). The main content area shows a grid of virtual machine images. The selected image is 'SFTP – OpenSSH FTP Server on Ubuntu 20.04 LTS' by Virtual Pulse S. R. O., categorized as a Virtual Machine. It starts at ₹2.212/hour. Other visible images include 'iPerf3 Server on Linux Red Hat 8.6', 'APEX Block Storage for Microsoft Azure', 'Acronis Backup Gateway', and 'Advanced Filezilla® FTP on Windows Server 2016'. Below the grid, the details for the selected image are shown, including the 'Plan' dropdown set to 'SFTP – OpenSSH FTP Server on Ubuntu...', a 'Create' button, and a 'Start with a pre-set configuration' button. The 'Overview' tab is active, showing the product description and pricing information.

SFTP – OpenSSH FTP Server on Ubuntu 20.04 LTS

SFTP – OpenSSH FTP Server on Ubuntu 20.04 LTS is the best solution to transfer files and data securely over encrypted network layers (using SSH2 protocol).

Secure Shell (SSH) is a protocol that enables a high level of encryption even in insecure networks. Unlike FTP, only one connection is used and the user authentication, commands, output as well as data files get encrypted and kept safe when they encounter various attacks while being transferred.

SSH FTP has pretty much-replaced legacy FTP as a file transfer protocol and is quickly replacing FTP/S. It provides all the functionality offered by these protocols, but more securely and more reliably, with easier configuration. There is basically no reason to use the legacy protocols any more.

SFTP also protects against password sniffing and man-in-the-middle attacks. It protects the integrity of the data using encryption and cryptographic hash functions, and authenticates both the server and the user.
